

BOX-LIKE CONTAINER WITH AN INTERPENETRATING STRUCTURE  
AND PROCESS FOR THE REALIZATION THEREOF

ABSTRACT

A box-like hollow body, particularly a container of  
5 various shapes and size, comprising at least an inner  
hollow body 3 and an outer hollow body 2,  
interpenetrating with each other so as to create an  
integral structure with particular characteristics of  
mechanical resistance and ornamental, and provided with  
10 a continuous inner surface without gaps and an outer  
surface patterned according to zones or sections.
